MIPOMat

What?

The key project goal is to establish a network of professional training of young scientists in interdisciplinary research of innovative surfaces and materials.

Who?

The realization of the network will be under the supervision of a high-quality team of eminent scientists with complementary expertise, designed to simultaneously solve several related problems, all of which are of direct relevance to the project goals.

Why?

Response to problems in the research, development and innovation system: continuous brain drain of researcher personnel; lack of career supporting opportunities for junior and young researchers and a weak linkage between the science, research and business sector.
